LANGUAGES

English (Native), Estonian (Full Professional Proficiency)

PROFESSIONAL SUMMARY

Frontend-oriented fullstack developer specializing in React, Next.js, and TypeScript, with over 7 years of programming experience and 3 years in startup and product development environments. Experienced in building web applications end-to-end, with a strong backend foundation in Python and Java and practical experience developing APIs, data logic, and cloud-based solutions. Work daily in collaborative Agile development environments and translate Figma designs into responsive applications. Currently studying Systems Development at TalTech.

SKILLS

Frontend Development: React, Next.js, TypeScript, Tailwind CSS, Figma.
Backend and Cloud: Node.js, Express.js, Python (Flask), Java, MongoDB.
Architecture and Workflow: Git, Nx Monorepos, CI/CD, Firebase SDK, Google Cloud Platform (GCP), Docker, Heroku.

EDUCATION

Bachelor's Degree in Systems Development at TalTech (Sep 2025 to Jun 2028)

Three-year Estonian-language academic program. Active member of the Lapikud and ITÜK student organizations, assisting in organizing events and supporting workshops and community activities.

High School Diploma at Tallinna Mustamäe Gümnaasium (Sep 2022 to Jun 2025)

Focus on sciences and general studies.

EXPERIENCE

Software Programmer at Software Development Club Lapikud (Sep 2025 to Present)

Contributed to development of the platform created for the Remondikohvik event, implementing core functionality using Next.js in collaboration with a team. Participate in internal organizational projects within an Agile workflow and technical discussions. Maintain and update the organization's website using Jekyll and Markdown. Design UI prototypes and visual materials in Figma. Assist in technical workshops covering practical use of Git, Python, and C.

Back End Developer at Doyenify (Jun 2025 to Oct 2025)

Developed backend services using Google Cloud Platform and Firebase. Built REST APIs and data processing logic using Express.js and Firebase Functions. Collaborated daily with frontend developers to refine technical requirements and ensure reliable integration between backend services and the user interface within an Agile environment.

Participant at Codesters.club Digital Product Development Program (Jan 2022 to Dec 2025)

Completed a three-year digital product development incubator program. Contributed to projects across the full product lifecycle, including problem validation, Lean Canvas analysis, user story mapping, development, and final presentations. Co-developed **Veric**, a youth recruitment platform built with Flask and DaisyUI. Developed **Flave**, a recipe search application using Next.js, Express.js, and MongoDB. Set up CI/CD workflows using Docker and Nx monorepos and deployed applications to Heroku and Vercel.

AWARDS AND HONORS

- Best Code Award, Codesters.club final competition, recognizing technical implementation in the Flave projects.
- School Commendation, Tallinna Mustamäe Gümnaasium, for international representation during the Euroweek program.
